VerionX

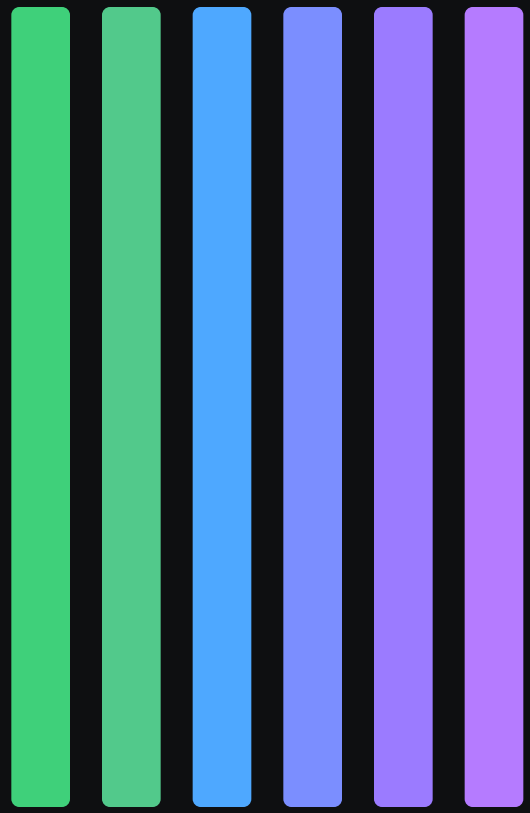

Building the workforce for the future.

We exist to equip people with know-how to maximise their potential on earth.

UloX — mastering the utility of AI

The agentic engineering trainer. Live now.

www.ulox.verionx.org

Six disciplines. One ladder.
Prompt → Agentic engineering

01 — THE SHIFT

Everyone can call a model.
Almost nobody can make one reliable.

Access is solved

A model is three lines of code and a key. The hard part moved somewhere else.

Reliability is not

Agents stall, loop, leak and overspend. Most teams find out in production.

Nobody is teaching it

Courses stop at the prompt. The other five disciplines go untaught.

THE COST OF GETTING IT WRONG

6
disciplines behind a reliable agent

1
of them is what most training covers

18
ways an agent breaks, each drilled in UloX

02 — WHY VERIONX EXISTS

One mission. One vision. Two products that serve both.

MISSION

We exist to equip people with know-how to maximise their potential on earth.

VISION

Building the workforce for the future.

HOW THAT BECOMES PRODUCT

Ulo — the foundation

Gamified learning for school-age Nigeria. Learn, play, practise, prove, earn.

UloX — the frontier

Agentic engineering for the people who will build and run AI systems.

One ladder, from first lesson to shipping an AI system.

LEARN
UIo
Lessons become play

PRACTISE
UIo
Challenges and streaks

PROVE
UIo
Skill, not completion

BUILD
UIoX
Repair broken agents

SHIP
UIoX
Bounded, observable systems

WHAT HOLDS THE TWO TOGETHER

ITOLS

A proprietary VerionX framework for writing an AI instruction you can actually test.

UIo teaches people to learn. UIoX teaches people to build. ITOLS is the common grammar underneath both — the thing a learner carries from one to the other.

04 — ULOX

You do not learn chess by reading about chess.

UloX hands you agent systems that are already broken, and asks you to repair them.

Tactics, not quizzes

Each drill is a real agent graph with a real fault: an unbounded loop, a router with two matching branches, a guard that logs and lets it through.

A search engine scores you

A beam search looks for the repair too, so the hint is the first move of a solution it actually found — not a sentence someone pre-wrote.

A simulator decides truth

Every fix is executed. "Did it work" is a fact, not an opinion.

Rated, like chess

Glicko-2 ratings move on what you actually solved, in single player and in rated matches against other engineers.

ITOLS

Five layers that turn a prompt into a contract you can test.

I	**Identity** — Who the agent is	Authenticity	Authority	Affirmation
T	**Tasks** — What it must do	Context	Content	Audience / Object
O	**Outcome** — What finished looks like	Fact	Flow	Synthesis
L	**Language** — How it must speak	Clarity	Composure	Tone
S	**Security** — What it must never do	Guardrail	Control	Balance

Fifteen checkable fields where there used to be a paragraph of hope — taught, drilled and scored inside UloX.

06 — HOW IT TEACHES

Read it. Fix it. Build it. Then prove it.

READ

A short idea, in plain words at your level.

FIX

A broken system, repaired in a bounded number of moves.

BUILD

The same pattern, built from nothing, graded by the simulator.

PROVE

A certificate with a code anyone can verify.

THE PART COMPETITORS CANNOT COPY QUICKLY

Proved content

Every drill is machine-checked: solvable inside its move limit, not already solved, and findable by the hint the app actually gives.

Earned certificates

Requirements are re-derived on the server before anything is issued. The build step cannot be self-declared.

A distribution loop

Finish a build, publish it, and anyone can open the link, replay the run and fork it into their own Lab.

07 — PROOF

We are past the idea stage.

ULO — REACH ALREADY BUILT

80,000
students engaged in 10 months

40
secondary schools activated

7
universities engaged

1.2M+
teachers reached via Nigeria Teachers

100+
student ambassadors

ULOX — WHAT IS LIVE TODAY

18
drills, each machine-proved solvable

6
disciplines, with guided builds

94
roadmaps, pulled live from source

250
glossary terms, alias-aware

154
one-page field notes

PARTNERS AND PROGRAMMES

Federal Government — co-partner on the national refugee re-skilling programme · Nigeria Teachers (1.2M+ members) · UNILAG · FUTO · UNICAL · LASU · UNIBEN · Bauchi State University · 10 AI labs being set up in schools

A young continent, and a skill the world has not taught yet.

$10B
Africa's EdTech market by 2026

HolonIQ

65M
students in Nigeria alone

UNESCO

70%
of Nigerians are under 30

UN DESA / NBS

98M
children and youth out of school in sub-Saharan Africa

UNESCO

WHY NOW

Every company is being told to add AI. Almost none of them have anyone who can make an agent behave under failure, attack or cost pressure.

UloX is free to learn on, in the browser, and already live. The market path is the one Ulo has already walked: Nigeria → West Africa → Africa → emerging markets.

09 — ROADMAP AND THE ASK

From a launched product to a scalable platform.

PHASE 1 · 0–12 MONTHS

Optimise

Open the first learning hub · deepen the gamification engine · ship the agentic curriculum · prove engagement

PHASE 2 · 12–24 MONTHS

Monetise

Convert premium · sign institutional licences · enterprise and government reskilling on UloX

PHASE 3 · 24–36 MONTHS

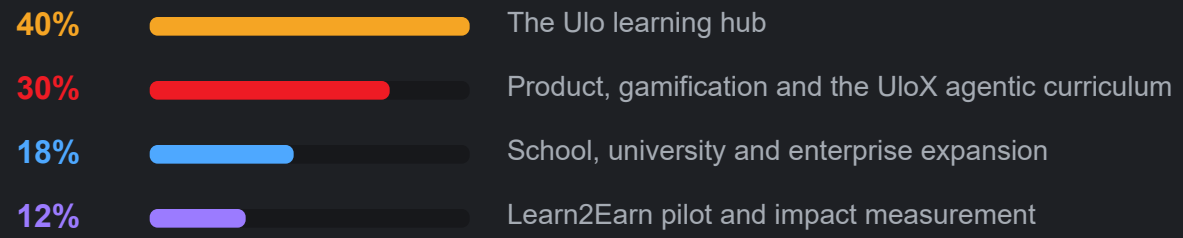

Scale

Expand across Nigeria and West Africa · grow the learning economy · win large institutional contracts

THE ASK

₦50,000,000

to turn a launched product into a scalable learning platform.

The future of work is not consuming more content.

It is becoming more capable.

We exist to equip people with know-how to maximise their potential on earth.

Building the workforce for the future.

Try it now
