01 — WHERE THE GAP MOVED

Anyone can call a model. The failures start after that.

Calling a model is easy

Three lines of code and an API key. Teams hit trouble after the first response, not before it.

Agents fail in production

They stall, loop without stopping, leak data through tool output and burn budget. Teams find out when a customer does.

Training stops at the prompt

Courses teach you how to word a request. They skip context, harness, loop, graph and safety.

WHAT A WORKING AGENT ACTUALLY NEEDS

6
disciplines, from prompt through to agentic

1
of the six that most courses reach

18
failure modes UloX drills by hand

02 — WHY VERIONX EXISTS

Ulo and UloX answer the same mission at two different stages.

MISSION

We exist to equip people with know-how to maximise their potential on earth.

VISION

Building the workforce for the future.

Prominent Tech Learning Hub

WHERE EACH ONE FITS

Ulo: gamified learning for school-age Nigeria. Learn, play, practise, prove, earn.

UloX: agentic engineering for the people who will build and run the systems.

03 — HOW THE TWO CONNECT

One ladder, from a first lesson to a shipped system.

LEARN
Ulo
Lessons become play

›

PRACTISE
Ulo
Challenges and streaks

›

PROVE
Ulo
Skill, not completion

›

BUILD
UloX
Repair broken agents

›

SHIP
UloX
Bounded, observable systems

THE FRAMEWORK UNDERNEATH BOTH

ITOLS

A proprietary VerionX framework for writing an AI instruction you can test.

Ulo teaches a student how to learn. UloX teaches an engineer how to build. Both run on ITOLS, so someone climbing from one to the other keeps the same way of instructing a model.

04 — ULOX

UloX hands you a broken agent and asks you to repair it.

The method comes from chess training, where players work through positions instead of reading essays about chess.

Every drill starts broken

An unbounded loop. A router with two branches that both match. A guard that logs an attack and lets it through anyway.

A search engine scores your fix

A beam search solves the position first, so the hint you get is the opening move of a line that actually works.

The simulator runs it

Each repair executes against mock tool responses. You watch it hold, or watch it fall over.

Rated on what you solved

Glicko-2 ratings move with your results, in single player and in rated matches against other engineers.

A PROPRIETARY VERIONX FRAMEWORK

Created by Elijah Moses

ITOLS

Five layers that turn a prompt into a contract you can test.

I	**Identity** — Who the agent is	Authenticity	Authority	Affirmation
T	**Tasks** — What it must do	Context	Content	Audience / Object
O	**Outcome** — What finished looks like	Fact	Flow	Synthesis
L	**Language** — How it must speak	Clarity	Composure	Tone
S	**Security** — What it must never do	Guardrail	Control	Balance

Fifteen fields a reviewer can check, in place of a paragraph of prose. UloX teaches, drills and scores all five layers.

06 — THE LOOP

Each discipline runs the same four steps.

READ

A short idea, written at the level you picked.

FIX

A broken system, repaired inside a move limit.

BUILD

The same pattern from nothing, graded by the simulator.

PROVE

A certificate carrying a code anyone can check.

THREE THINGS THAT TOOK TIME TO BUILD

Drills we verified

A script brute-forces all 18 before release. Each one must be solvable inside its move limit, must not already be solved, and must be reachable by the hint the app gives.

Certificates you earn

The server re-derives every requirement before it issues one. A learner cannot tick the build step for themselves.

A loop back in

Publish a build and anyone can open the link, replay the run and fork it into their own Lab.

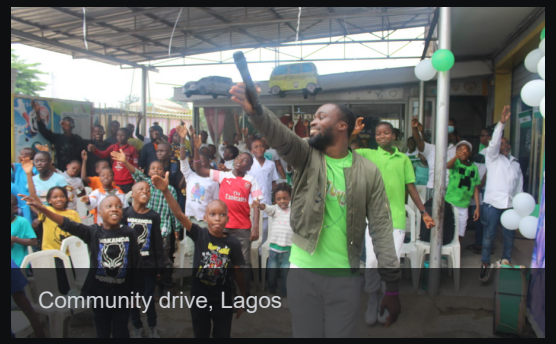

07 — PROOF

We are past the idea stage.

Owerri City High School

State High School

Community drive, Lagos

ULO — WHAT THE OUTREACH HAS REACHED

80,000
students engaged in 10 months

40
secondary schools activated

7
universities engaged

1.2M+
teachers via Nigeria Teachers

100+
student ambassadors

ULOX — WHAT IS LIVE TODAY

18
drills, each proved solvable

6
disciplines with guided builds

94
roadmaps pulled live

250
glossary terms, alias-aware

154
one-page field notes

Federal Government: co-partner on the national refugee re-skilling programme. Nigeria Teachers (1.2M+ members). UNILAG, FUTO, UNICAL, LASU, UNIBEN and Bauchi State University. Ten AI labs being set up in schools.

65 million students, and almost no training in how AI systems fail.

$10B
Africa's EdTech market by 2026

HolonIQ

65M
students in Nigeria alone

UNESCO

70%
of Nigerians are under 30

UN DESA / NBS

98M
children and youth out of school in sub-Saharan Africa

UNESCO

WHY NOW

Boards are telling their teams to add AI. Few of those teams have anyone who can make an agent behave under failure, attack or cost pressure.

UloX runs free in a browser and is live today. The route to market is the one Ulo has already walked: Nigeria, then West Africa, then the wider continent.

09 — ROADMAP AND THE ASK

From a launched product to a scalable platform.

PHASE 1 · 0–12 MONTHS

Optimise

Open the first learning hub. Deepen the gamification engine. Ship the agentic curriculum. Prove engagement.

PHASE 2 · 12–24 MONTHS

Monetise

Convert premium subscribers. Sign institutional licences. Run enterprise and government reskilling on UloX.

PHASE 3 · 24–36 MONTHS

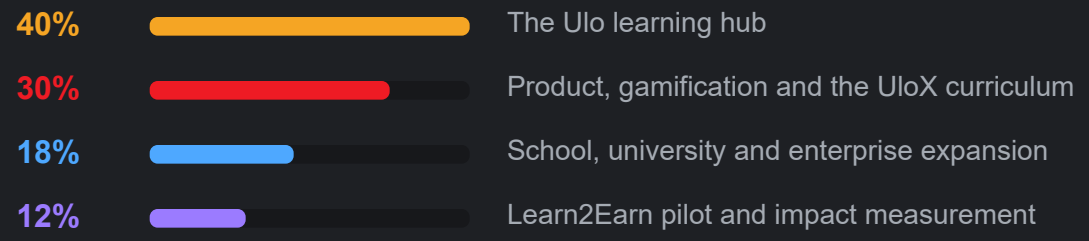

Scale

Expand across Nigeria and West Africa. Grow the learning economy. Win large institutional contracts.

THE ASK

₦50,000,000

to turn a launched product into a scalable learning platform.

The future of learning is not consuming more content.

It's becoming more capable.

We exist to equip people with know-how to maximise their potential on earth.

Building the workforce for the future.

Try it now
